

Interest in Астрономія

Wikipedia pageviews · Ukrainian (uk) · Sep 2024 – Aug 2026 · 2026-09-25

QUESTION

We are considering adding an astronomy course. Is interest growing in the Ukrainian Wikipedia, and how much can we trust it?

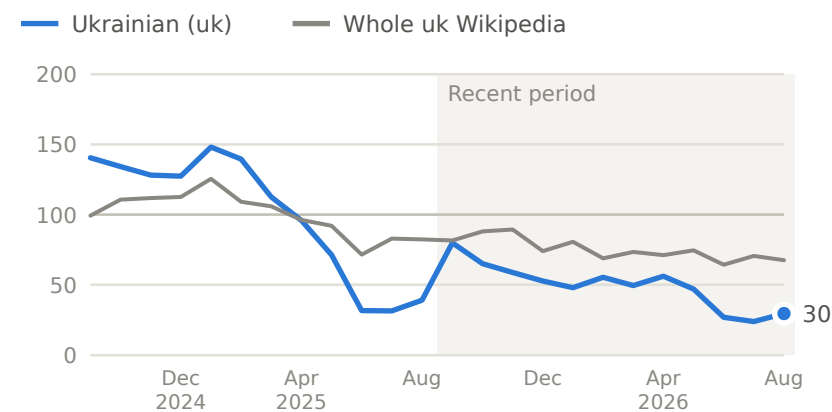

ANSWER

Interest is not growing: it is falling steadily. A basket of six core astronomy articles shows a year-over-year decline whose 95% interval stays below zero, confirmed in nearly every month and surviving the removal of spike days.

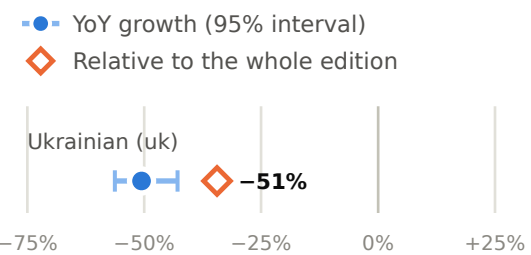

Key metrics

Topic · edition	Views / month	YoY growth [95% CI]	Excl. spikes	vs whole edition	Months up	Verdict
Ukrainian (uk)	6,972	−51% [−56%...−43%]	−51%	−34%	0/12	● falling · high

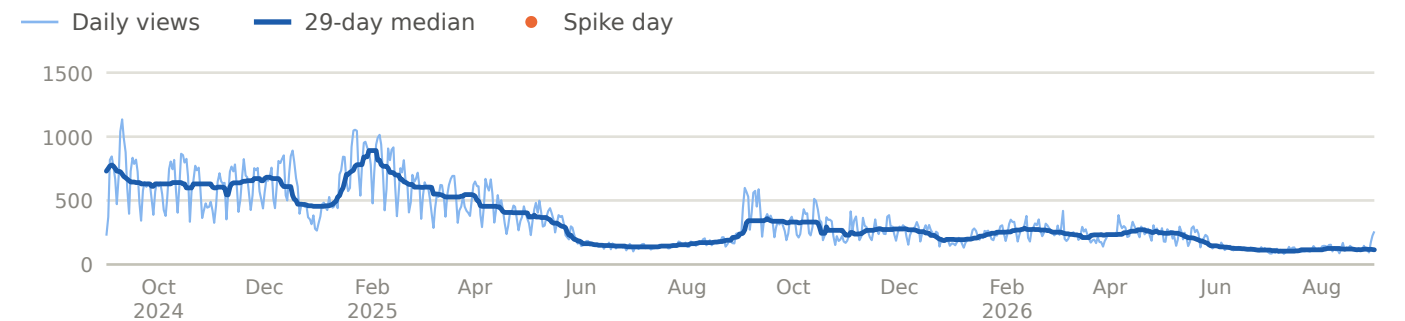

Monthly views, index (baseline period = 100)

Year-over-year growth with 95% interval

Daily views, 29-day median and spike days

Recommendations

- Do not plan around growing demand; if you launch, target September, when the seasonal peak is three times the average month.
- Pageviews show curiosity, not willingness to pay.

How much to trust this

- Whole edition −25% YoY; topic relative to it −34%.
- Seasonal peaks: September, October (up to +51% above average).

Assumptions and limitations

- Pageviews measure curiosity, not purchase intent: use them to choose what to test next, not as proof of demand.
- A language edition is not a country. Readers by country: uk: Ukraine 65%, United States 11%.
- Only human traffic (agent=user) is counted; Wikimedia's bot filter is imperfect, so anomalies are checked above.
- Counts cover the listed articles' current titles; redirects and other articles on the topic are not included.
- Overall Wikipedia traffic is shifting (AI answers, search changes); the 'vs whole edition' column corrects for that.

METHOD AND SOURCES

Data: Wikimedia Pageviews API, daily human views, all platforms. Growth = Sep 2025 – Aug 2026 vs the same months a year earlier (Sep 2024 – Aug 2025). 95% interval: paired bootstrap over months (5,000 resamples). Spike day: above 3x the 29-day median. Relative growth divides by the edition's total views. Generated 2026-09-25 by wiki-interest-research 0.1.0. Articles: uk: Астрономія, Сонячна система, Чорна діра, Галактика, Телескоп, Астрофізика.
